## What is GGP (KUSANONE)?

The Grant Assistance for Grassroots Human Security Projects (GGP), known as "KUSANONE", was initially launched in 1989 by the Government of Japan. It is a type of the Official Development Assistance (ODA) scheme and is designed to meet the needs of grassroots-level communities. Its aim is to improve the well-being of community members directly and promptly. In Tajikistan, a total of 462 projects have been implemented through the GGP scheme, amounting to approximately USD 38.3 million from 1996 to the present.

### The Project for Improvement of Medical Equipment of City Healthcare Center No.13 in Dushanbe City, FY2021

Before

The existing fluorography system, manufactured in 1975, was significantly outdated and spare parts were no longer manufactured. The doctors, therefore, had to replace the broken parts with substitution, making prompt and accurate diagnoses impossible.

After

The donated fluorography system is used for examinations of 3,000 to 4,000 patients annually and is utilized for the early detection of lung diseases.

### The Project for Provision of Equipment to Education Center for Adults in Asht District, FY2018

Supplying the center with equipment such as sewing machines, printers, cooking tables, ovens, and mixers allows for effective vocational training, which helps improve the living standards of women in the community.

Before

The school building was constructed by local residents who did not have specialized skills, resulting in a structure that was not strong enough and had started to age. There were no lighting facilities in the rooms, and classes were interrupted by the need to install waterproof tarpaulins when it rained.

After

The school is in very good condition, the classrooms are clean, and the children are able to study in a safe environment.

### The Project for Construction of New School in Baghliisoy Village, Lohuti Jamoat, Khovaling District, FY2021

The GGP scheme focuses on basic human needs, including primary and secondary education, healthcare, agriculture, infrastructure development, women empowerment, water supply, and disaster risk reduction.

### The Project for Construction of Irrigation Canal in Suchon Jamoat, Shughnon District, FY2022

Installing underground pipes to connect the water source with the current pipeline helped to establish a stable water supply for agriculture. This water is now used to irrigate 290 hectares of land, benefiting 180 households. Resulting in higher crop yields, increased income for the local residents, and ultimately contributing to the reduction of poverty.

### KUSANONEKO

is an official character of KUSANONE grant program.

The cat (neko) holds a blade of grass (kusa) in its paw, spreading smiles around the world.
